R Bhavitha – 2520030489

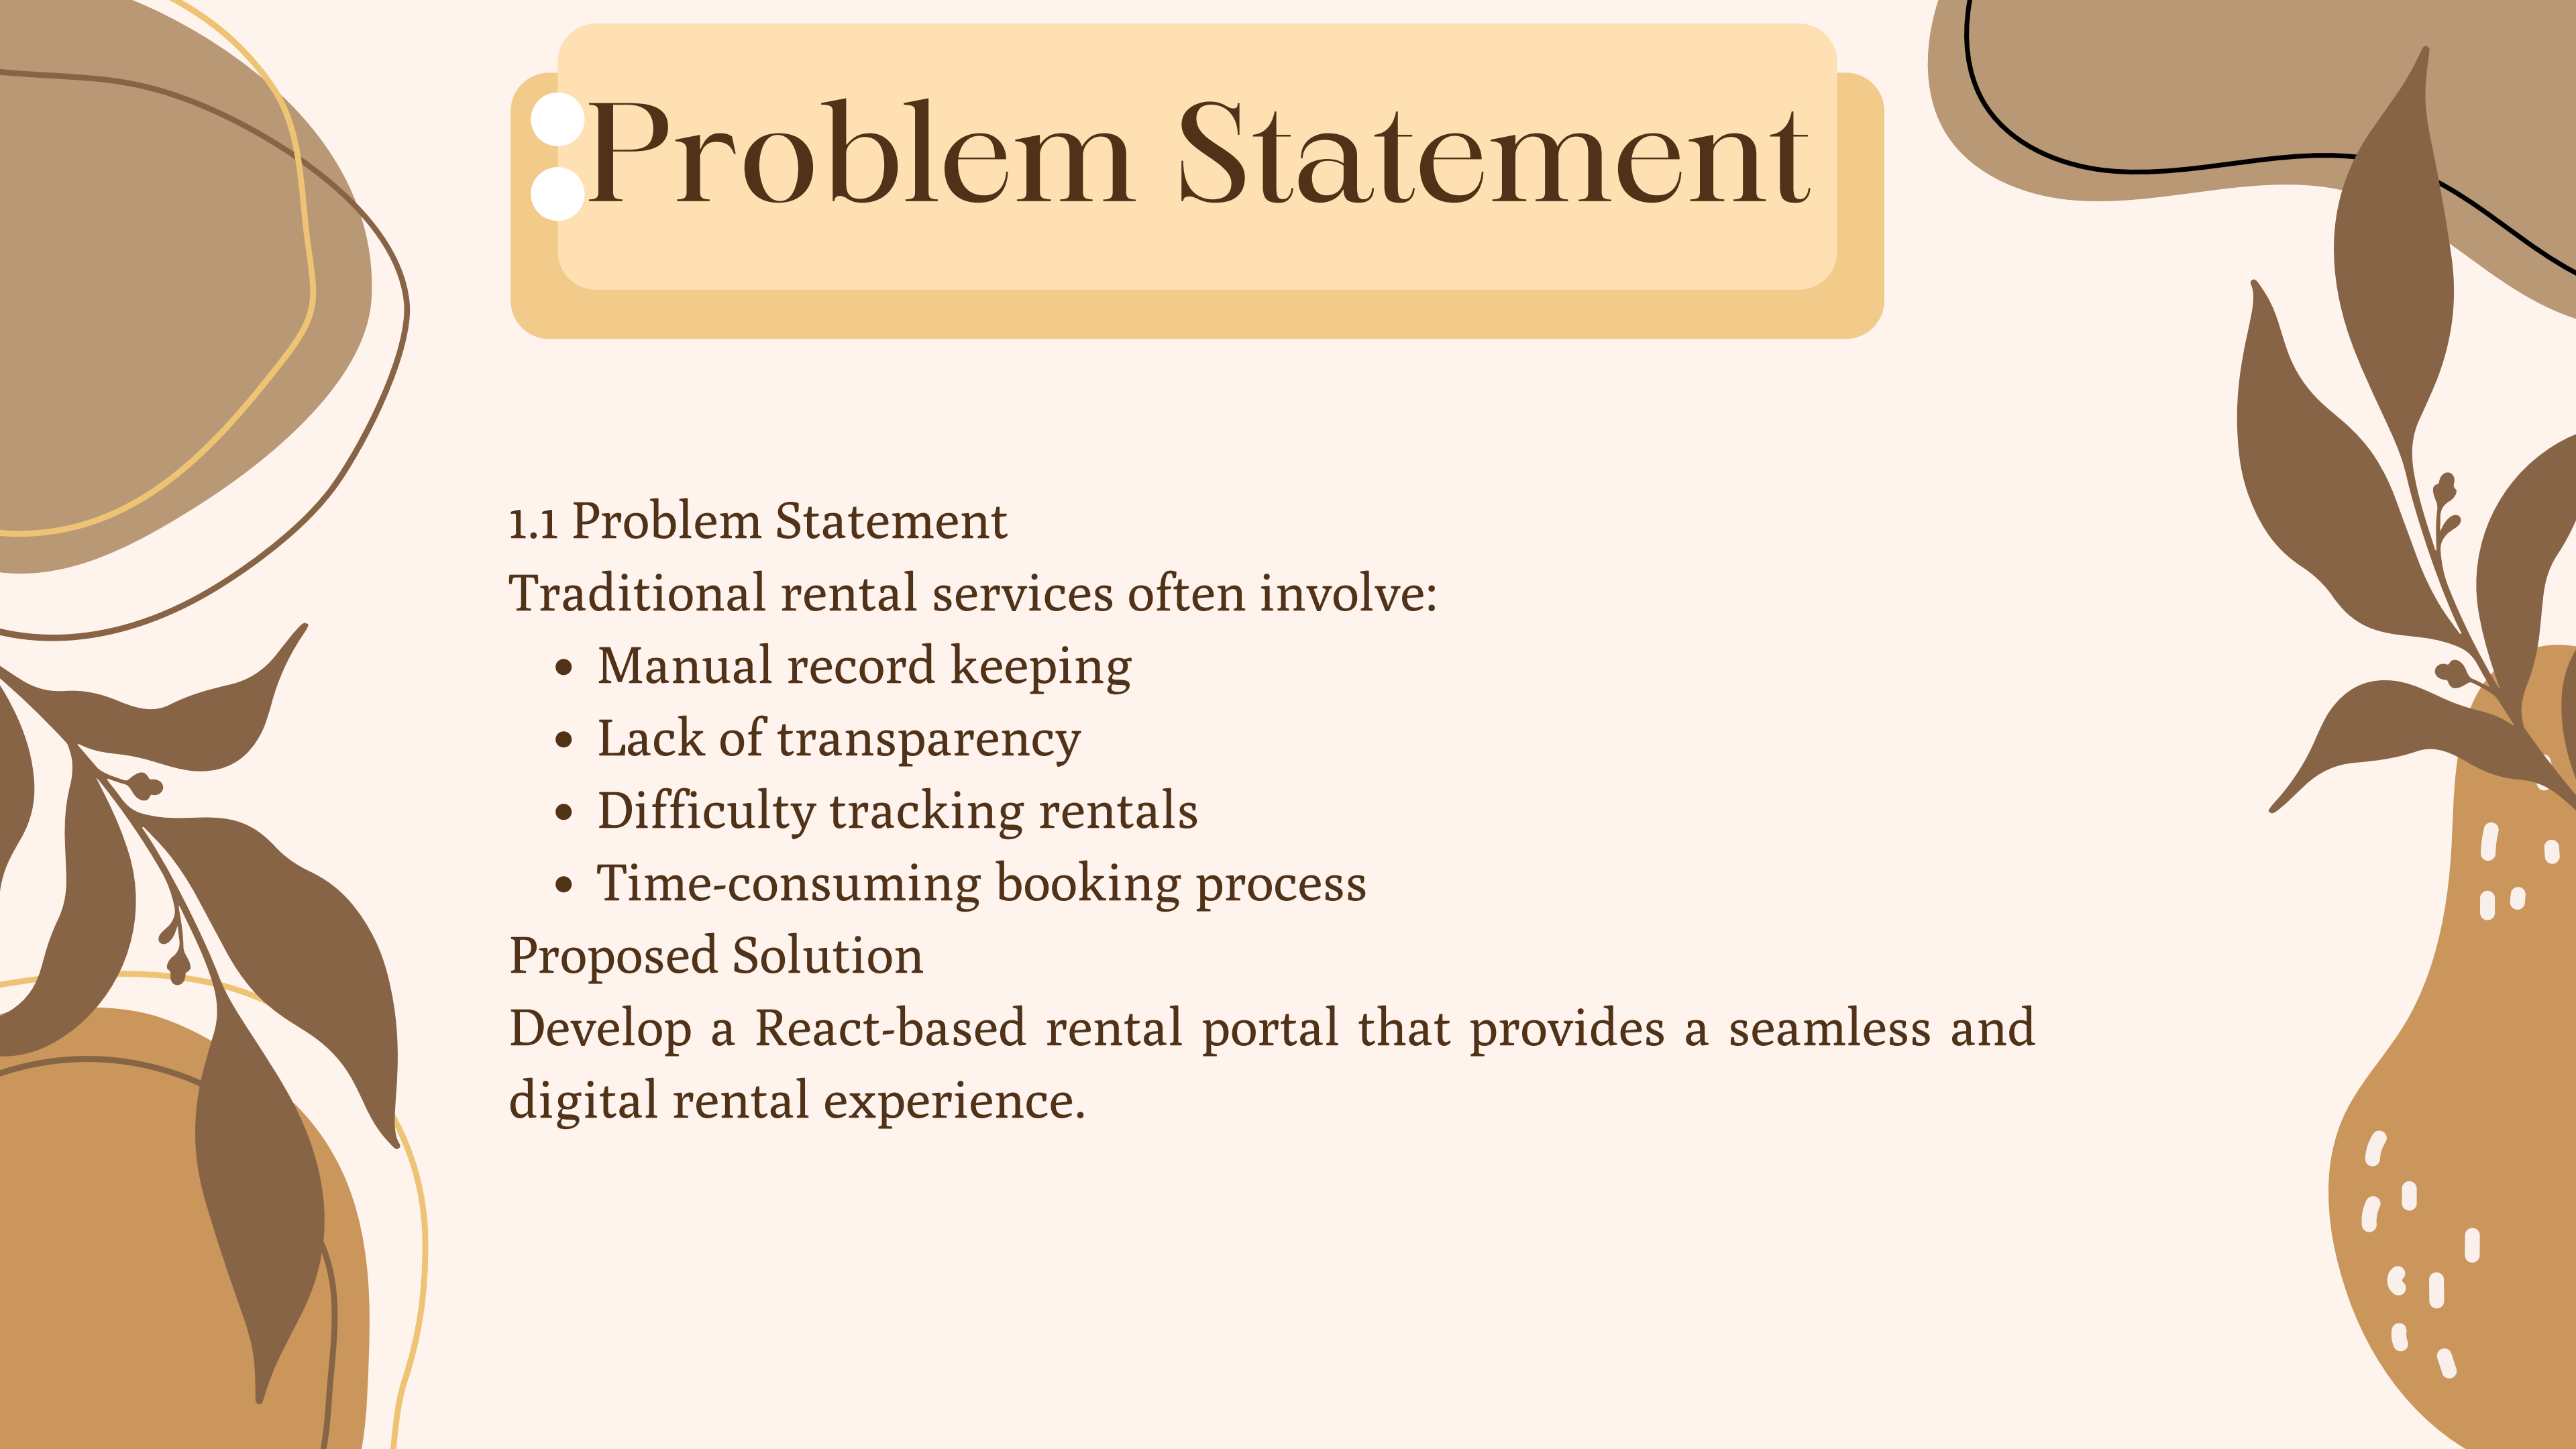

# Project Overview

Rentzy is a web-based rental management platform that allows users to browse, rent, and manage various products online. The system simplifies the rental process through a user-friendly interface and real-time order tracking.

## Modules:

- User Authentication - 2520030130
- Product Catalogue - 2520030489
- Rental Booking - 2520030130
- Order Management - 2520030489
- User Profile - 2520030130

# ●● Problem Statement

## 1.1 Problem Statement

Traditional rental services often involve:

- Manual record keeping
- Lack of transparency
- Difficulty tracking rentals
- Time-consuming booking process

## Proposed Solution

Develop a React-based rental portal that provides a seamless and digital rental experience.

# Objectives & Features

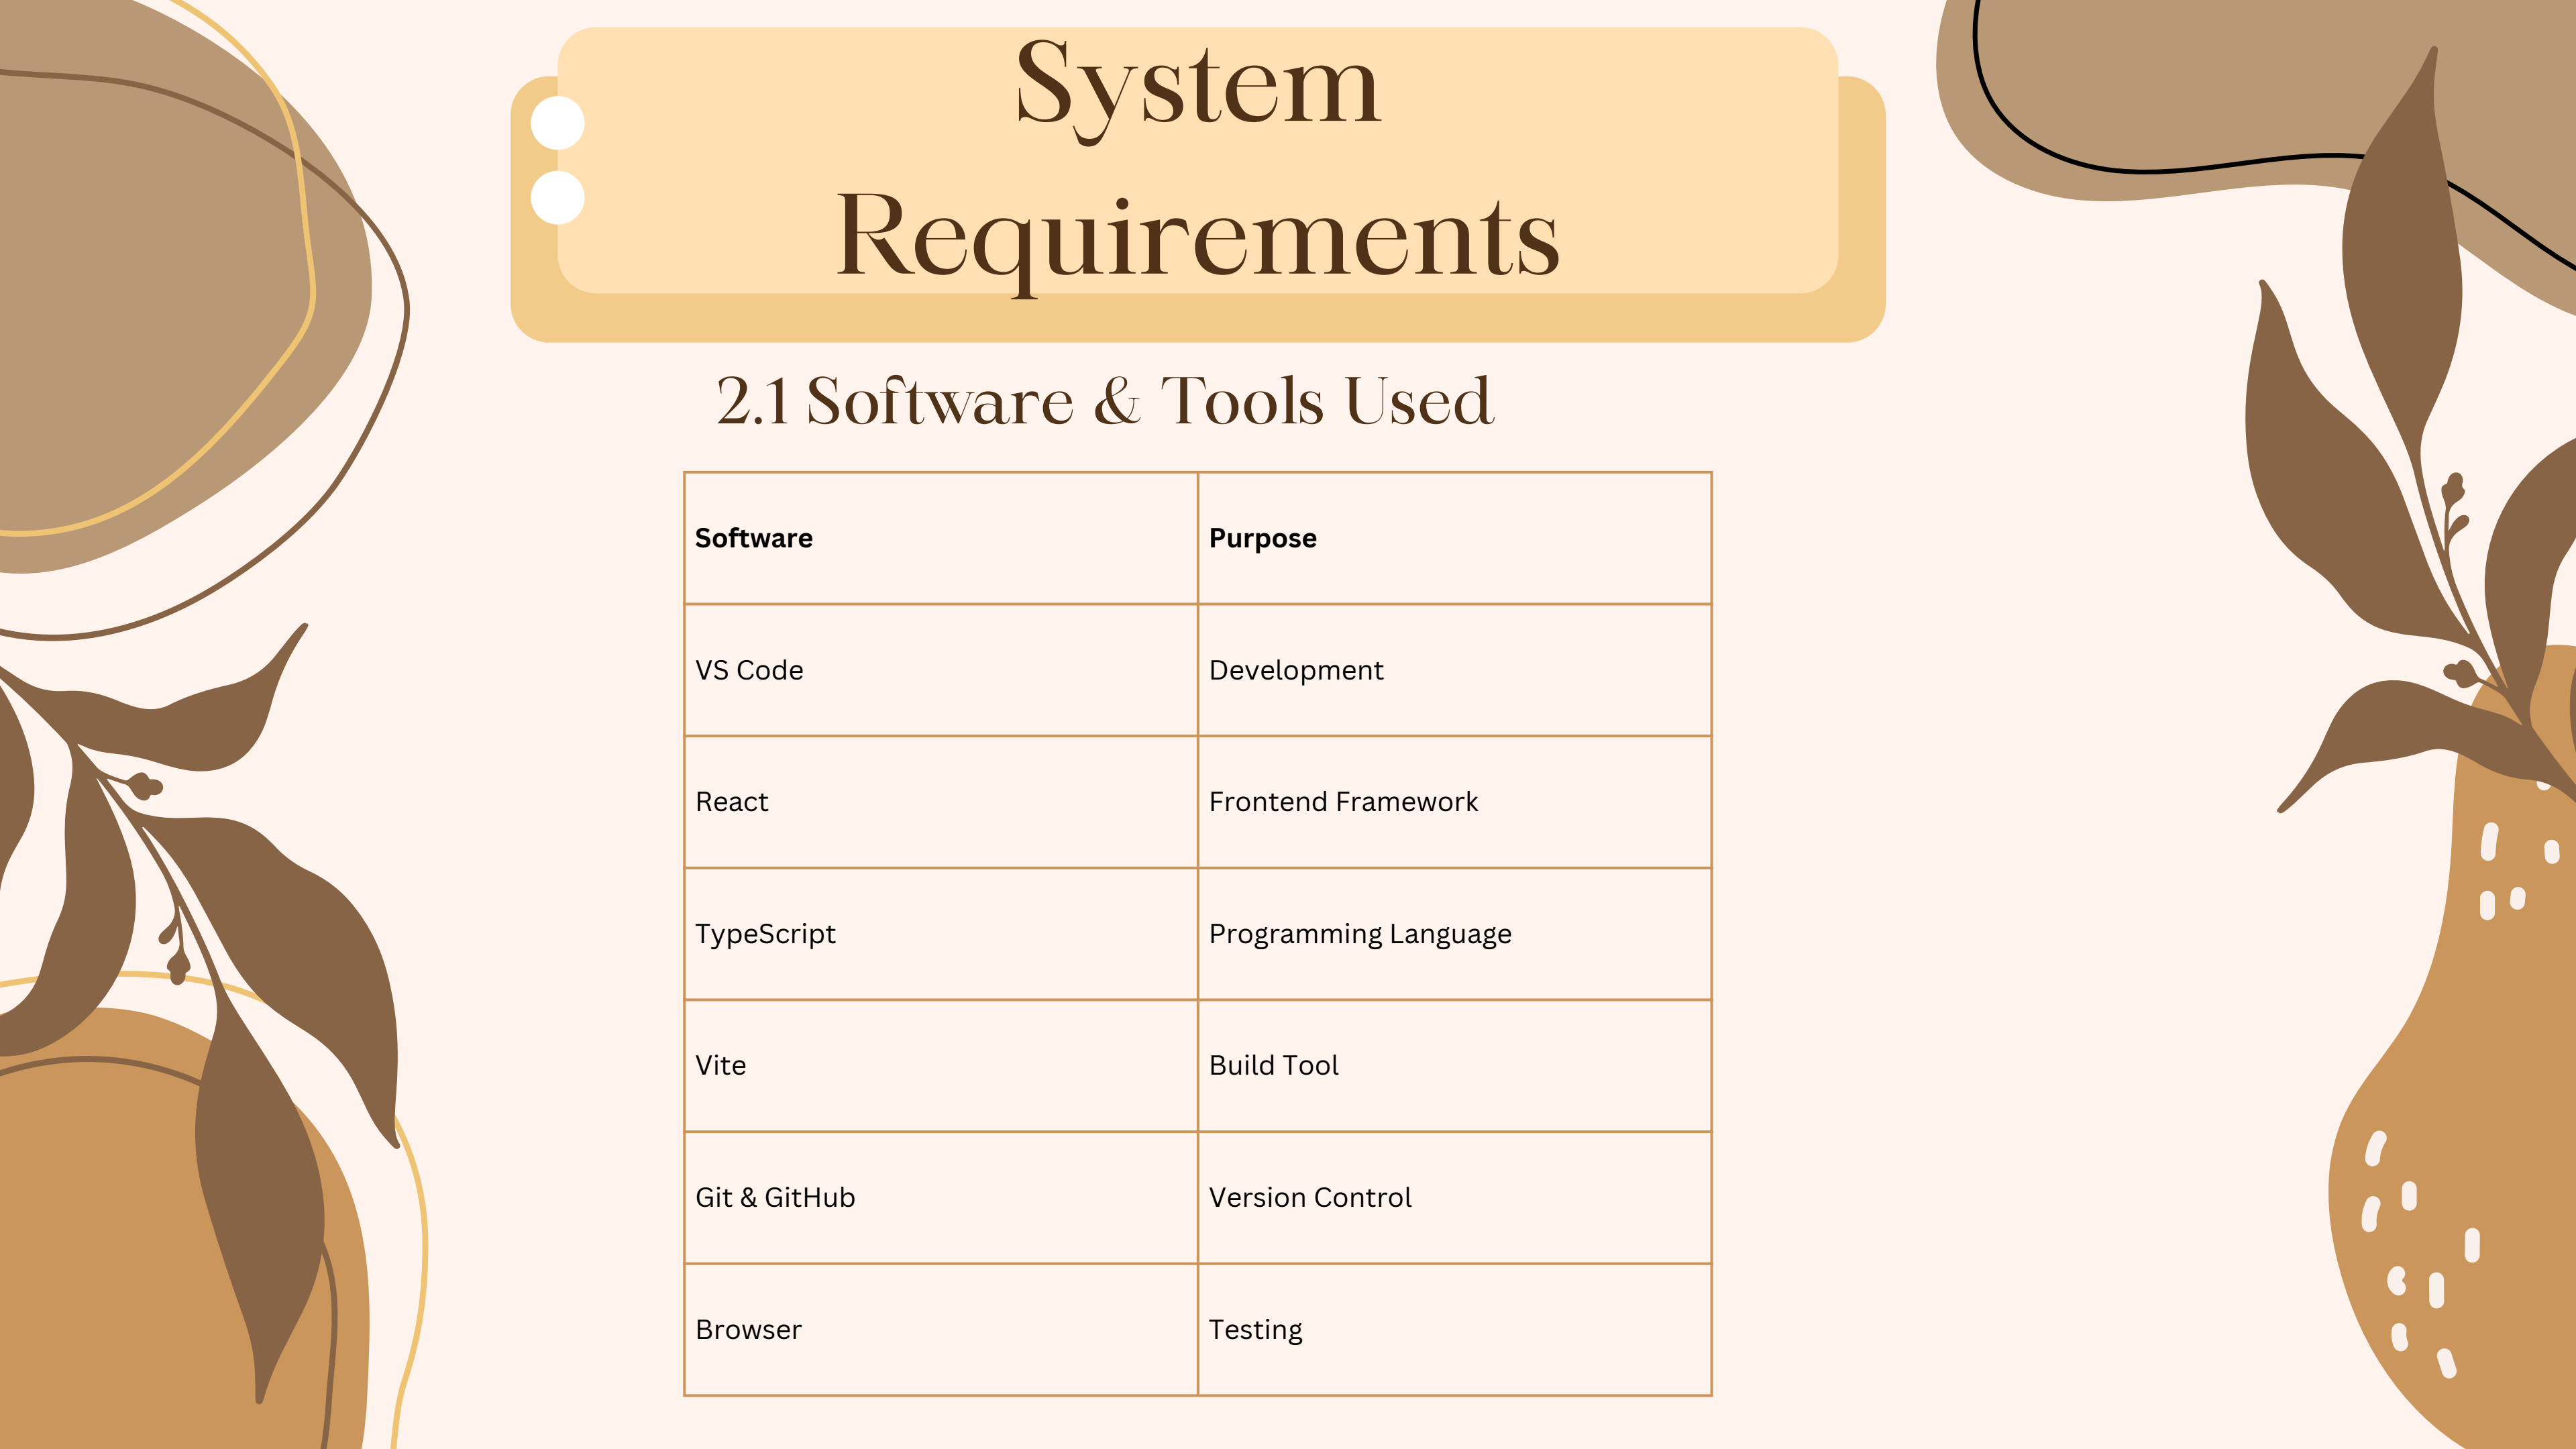

- 1.2 Objectives & Features

## Objectives

- Simplify rental booking
- Improve user experience
- Enable order tracking
- Maintain rental records digitally

## Features

- Login & Registration
- Product Browsing
- Rental Duration Selection
- Order Tracking
- User Profile Management

# System Requirements

## 2.1 Software & Tools Used

| Software     | Purpose              |
|--------------|----------------------|
| VS Code      | Development          |
| React        | Frontend Framework   |
| TypeScript   | Programming Language |
| Vite         | Build Tool           |
| Git & GitHub | Version Control      |
| Browser      | Testing              |

# Tech Stack

## 2.2 Tech Stack

### Frontend

- React.js
- TypeScript
- Tailwind CSS
- ShadCN UI Components

### Backend/API

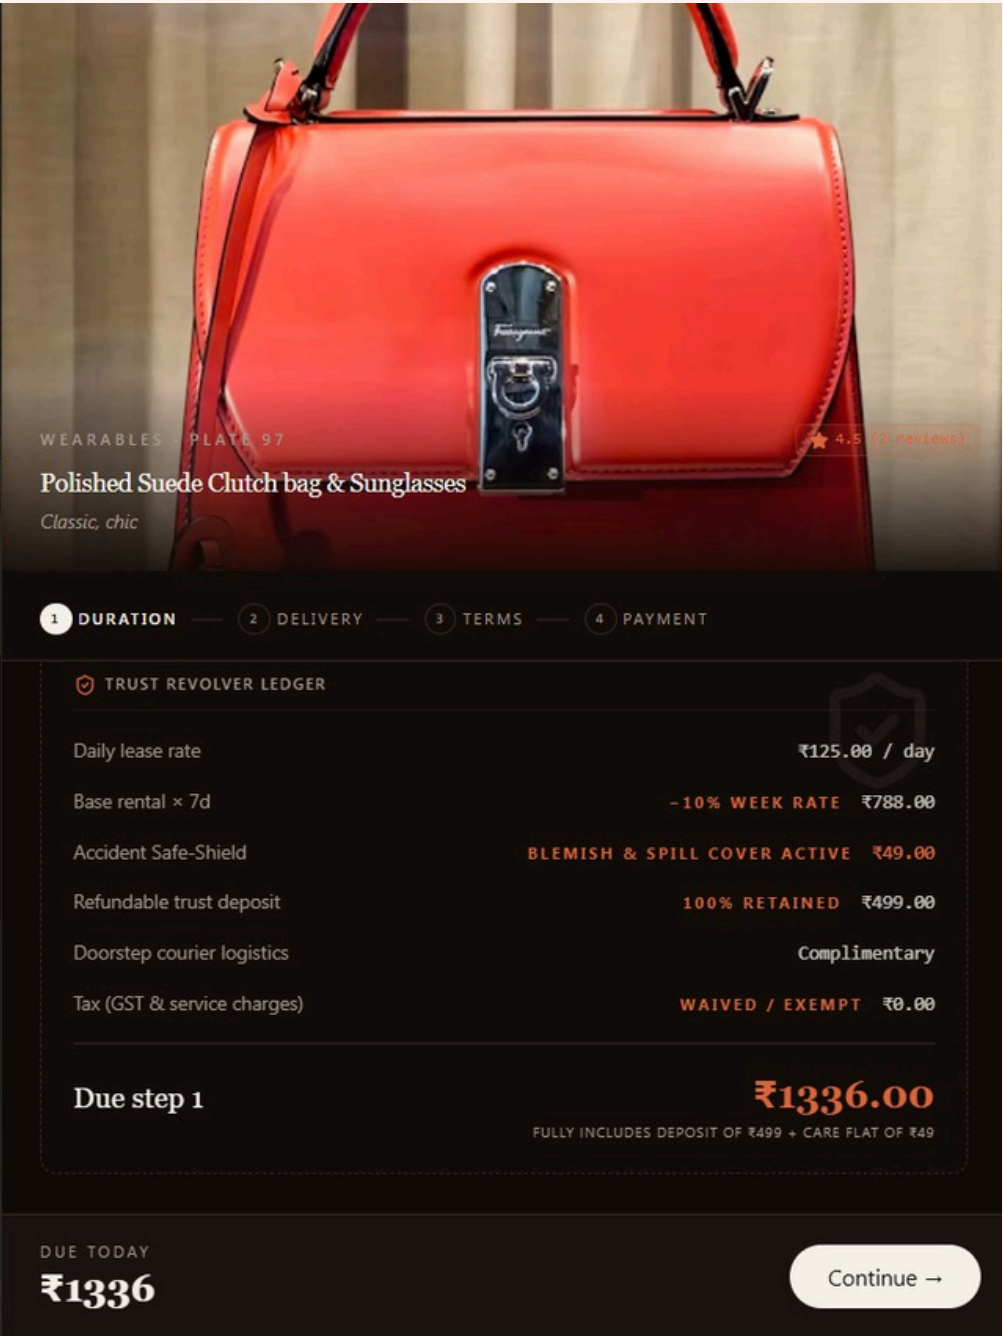

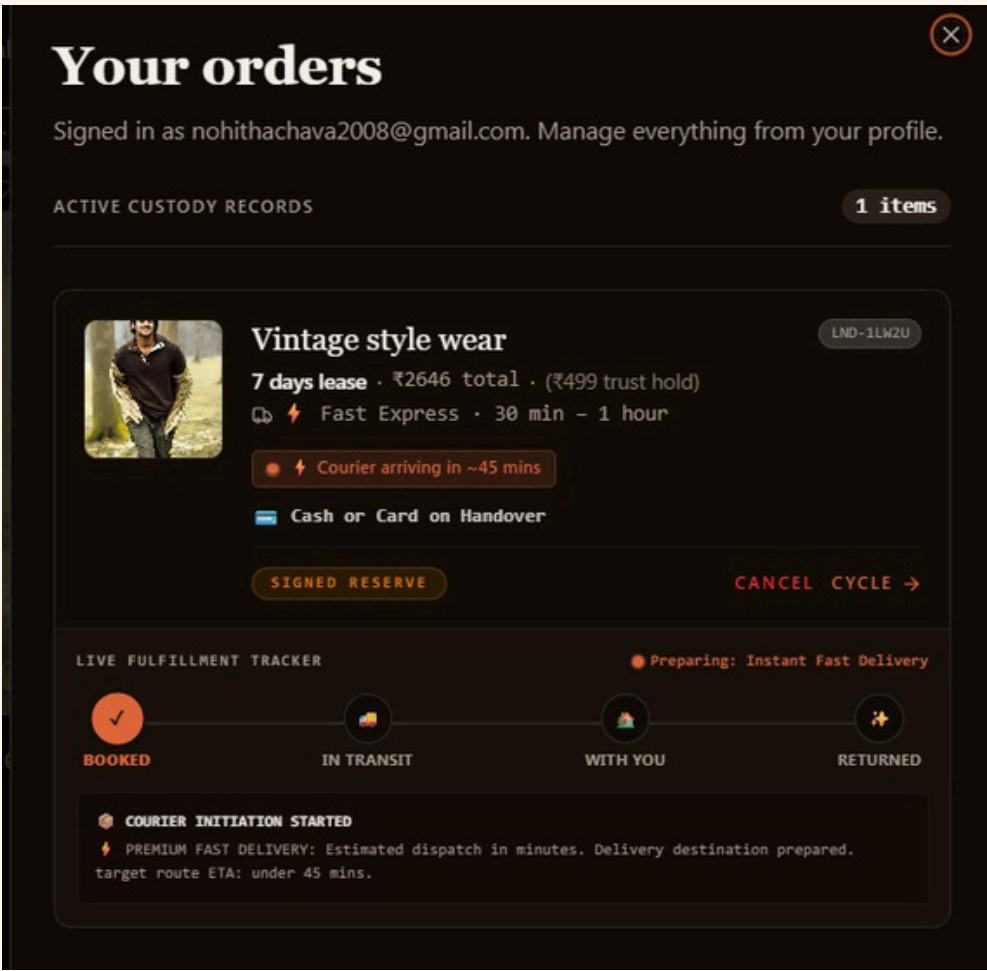

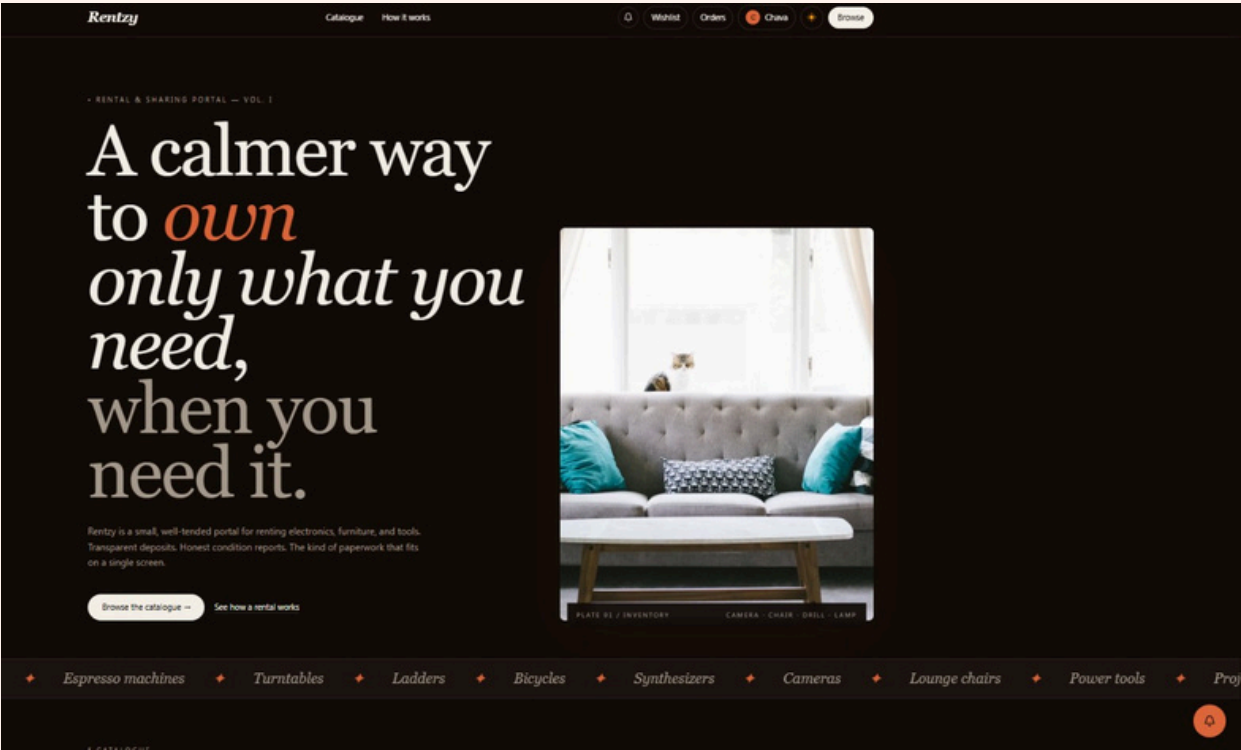

- Local Storage Based Data Management
- Authentication Module
- Rental Data Services

### Architecture

User → React UI → Business Logic → Data Storage

# App Layout

## 3.1 Application Layout

### Home Page

- Login/Register
- Product Catalogue
- Rental Checkout
- Profile Page
- Order Tracking

# React Component Folder Structure

```
src/  
|  
├─ routes/  
|   ├─ index.tsx  
|   ├─ login.tsx  
|   └─ profile.tsx  
|  
├─ components/  
|   └─ ui/  
|  
├─ assets/  
|  
├─ lib/  
|   ├─ auth.ts  
|   └─ rental-data.ts  
|  
└─ main.tsx
```

# Main Application Logic

## 4.1 Main Application Logic User Authentication

`</>` TypeScript

```
const [email, setEmail] = useState("");  
const [password, setPassword] = useState("");  
  
const u = signIn(email, password);  
navigate({ to: "/profile" });
```

### Purpose

- Validates user credentials
- Redirects user after login

# React Hooks

## 4.2 Use of React Hooks

### useState

`</> TypeScript`

```
const [user, setUser] = useState(null);  
const [orders, setOrders] = useState([]);
```

### useEffect

`</> TypeScript`

```
useEffect(() => {  
  const u = currentUser();  
  setUser(u);  
}, []);
```

### Benefits

- State Management
- Dynamic UI Updates
- Lifecycle Handling

## Additional Code Snippets

### Rental Order Management

`</> TypeScript`

```
setOrders(loadOrders(user.email));
```

### Statistics Calculation

`</> TypeScript`

```
const totalSpent =  
orders.reduce((s, o) => s + o.total, 0);
```

### Navigation

`</> TypeScript`

```
navigate({ to: "/profile" });
```

These snippets demonstrate:

- Data Retrieval
- Order Processing
- Page Navigation

**Rentzy**  
ACCOUNT

### A quieter *key* to the things you almost own.

One small account. Reservations, deposits, condition reports, and a tidy countdown of how many days are left on each rental.

V1.0.0 - LOCAL-FIRST

# Workflow Example

## 5.2 Working Workflow

# Conclusion

## Project Summary

Developed a complete rental portal using React.  
Implemented authentication and order management.  
Created responsive and user-friendly interfaces.  
Improved digital rental experience.

## Key Technical Learnings

React Components

React Hooks

TypeScript

Routing

State Management

UI Development with Tailwind CSS

Thank You
